

# Global Forest Science

Global Forest Science is a research institute dedicated to conserving the world's wild forests and all natural resources through basic scientific research and children's ecological education. Founded by [Dr Reese Halter](#) in 1988, Global Forest Science is now a worldwide leader in forest conservation including aspects of air, water, soil, trees, animals, insects, non-timber forest products and medicine. International teams of multi-disciplinary scientists work on a wide range of forest conservation issues. Global Forest Science includes scientists, citizens, industry and government and is on the forefront of short-circuiting ecological disasters and protecting fragile ecosystems.

With funding for essential scientific exploration of wild forests by foundations, individuals and corporations, Global Forest Science has undertaken fundamental or basic forest science research to support conservation biology. Devoted to the pursuit of excellence in science, the organization provides cutting edge scientific research to private landholders, governments and industrial decision makers to assist them in up-to-date, sound ecological decisions.

Global Forest Science and its scientists are providing cutting-edge insights into the complexity of how wild forest ecosystems function; in turn, helping to fast track policy change and protect threatened ecosystems. New knowledge on forest biological processes is immediately applied to conservation plans and is freely contributed to ongoing applied research.

With the understanding that youth involvement is a key to a better ecological future, Global Forest Science educational outreach programs are encouraging children around the world to embrace conservation, science and learning, and to become tomorrow's Earth stewards. With numerous successful educational initiatives, Dr Reese Halter and Global Forest Science are dedicated to educating children about the critical role of wild forests in sustaining life on our planet.

For more information on the institute or to learn how to support forest science research efforts, visit Global Forest Science on the web [www.GlobalForestScience.org](http://www.GlobalForestScience.org) Contact Bob Dalby for more information [info@GlobalForestScience.org](mailto:info@GlobalForestScience.org)
