

Cal Lu University: Environmental Sciences - Natural Resources
Some student comments from ENV5-482/BIOL-482 Dr Reese Halter

- Although initially concerned at the idea of giving two speeches each week, by the end of the semester my nerves had lessened significantly which was wonderful. My public speaking improved greatly.
- He cares about student progress
- I love how passionate this teacher is about teaching and learning. It is nice to be around a teacher who doesn't act like he knows it all, he still admits to learning everyday, as we all do! I love this method of teaching and feel it is extremely effective. We all get to practice public speaking skills and writing skills every single class and honestly, what better skills could we have for the real world? Its great!
- I really liked this class a lot! I learned so many things about our earth climate change related that I had no idea about! It definitely opened my eyes more and helped me become a more environmentally aware individual. I liked how we were never given any tests or quizzes because it made the class especially fun and it was one of the only classes that I always looked forward to going to.
- By far one of the best professors that I have ever had. We were always forced into participating in class discussions and by the end of the course everyone was excited to participate and give their insight on what they had learned between classes. I'm so glad I took this class. I came out of it with such an open mind on life and the environment.
- Dr. Reese is a great teacher with enormous amounts of great information. This is my favorite class I have taken at CLU so far. Thanks so much for all of the great lectures and discussions and invaluable information about the environment. Going into this class I wanted to be a conservation biologist, and now I want to even more and wish to focus on marine conservation.
- One of my favorite teachers ever!
- Please allow Dr. Reese to teach more courses. I will definitely be looking to take another one of his classes in the future.
